NATALIA KRASNOVA

Senior QA Automation Engineer | AI & LLM Testing (Evals, Prompt Regression) | Python · Playwright · Selenium · API

Calgary, AB, Canada (Open to Remote) · krasnova.natalia@outlook.com · Portfolio: nataliakrasnova.netlify.app · GitHub: mindful321

Professional Summary

Senior QA Automation Engineer with 10 years of experience in Agile/Scrum teams, helping teams ship faster without shipping bugs, across web, mobile, API and connected-device (IoT) products. At Workeasy, owns test strategy and release sign-off for a workforce platform running on web, iOS, Android, kiosks and biometric time clocks; automating regression with Python and Selenium cut regression time by more than 50%. Previously tested Ford's FordPass connected-vehicle app. Uses generative AI daily (Claude Code, GitHub Copilot, ChatGPT) to design tests and generate test data. Building a live QA portfolio with a CI release gate that blocks risky releases automatically and LLM evals in DeepEval. Live portfolio with a bug-hunt demo: [your URL]

Key Achievements

- **50%+ faster regression** after automating the regression suite with Python, Selenium WebDriver and Mabl.
- **10% more stable software** at Workeasy, with less defect leakage to production; recognized as the QA team's top performer.
- **2,000+ test cases** written across web, mobile, API and hardware products.
- **Connected-vehicle testing** on FordPass: remote start, lock/unlock and vehicle status across the app, cloud services and vehicles.

Technical Skills

- **AI-Assisted QA:** Claude Code (AI agents), GitHub Copilot, ChatGPT, prompt engineering, AI-assisted test design and test data generation
- **AI Quality:** LLM evals, golden datasets, prompt regression, prompt-injection testing, token/cost guardrails, CI release gates (DeepEval, Pytest)
- **Test Automation:** Python, Selenium WebDriver, Playwright, Cypress (JavaScript), Pytest, Cucumber (BDD), Mabl, PyCharm
- **Web Technologies:** DOM, XPath, CSS selectors, HTML, Chrome DevTools
- **API Testing:** Postman, Swagger, REST APIs
- **Mobile & IoT Testing:** iOS, Android, TestFlight, Android Studio, Xcode, BrowserStack, Charles Proxy; connected vehicles, biometric time clocks and kiosks
- **CI/CD & Version Control:** Jenkins, GitLab CI/CD, GitHub Actions, Git
- **Collaboration & Support Tools:** Jira (Zephyr, Xray), Azure DevOps, Confluence, HubSpot
- **Databases:** SQL, Oracle, MySQL
- **Test Strategy & Leadership:** test strategy and planning across the full SDLC, release sign-off, bug triage, mentoring and onboarding QA engineers, Agile/Scrum (sprint planning, stand-ups, retrospectives)
- **Testing Types:** Manual and automated testing; Functional, Regression, Smoke, Integration, End-to-End, API, Mobile, UI/UX, Accessibility, Usability, Compatibility

Professional Experience

Senior Software QA Automation Engineer | Workeasy (formerly Easy Workforce) | Remote | 06/2021 – Present

Workforce management SaaS (Time & Attendance, Scheduling, Time Off, HR) on web, a hybrid mobile app, kiosks and biometric time clocks.

- Own test strategy and release sign-off across web, iOS, Android, kiosks and fingerprint/face-recognition time clocks.
- Automated the regression suite with Python, Selenium WebDriver and Mabl, cutting regression time by more than 50%.
- Publish automated test reports through Jenkins, giving stakeholders real-time visibility into test results and quality.
- Test payroll and third-party integration APIs with Postman, validating data exchange end to end.
- Test the hybrid mobile app on Android (Google Play) and iOS (TestFlight).
- Use Claude Code, GitHub Copilot and ChatGPT to generate test cases, edge cases and test data from user stories.
- Mentor and onboard new QA engineers.
- Improved software stability by 10% and reduced defect leakage to production; recognized as the QA team's top performer.

Quality Assurance Engineer | Ford Motor Company | 03/2019 – 04/2021

FordPass: Ford's connected-vehicle mobile app for iOS and Android, used to control and monitor vehicles remotely.

- Tested remote vehicle features end to end (remote start/stop, lock/unlock, scheduled start, vehicle locator and vehicle status) across the mobile app, cloud services and FordPass Connect-equipped vehicles.
- Validated vehicle data shown in the app, including fuel and oil levels, service history and warranty details.
- Designed test scenarios and reviewed test plans to cover both happy-path and negative cases, such as weak connectivity and failed remote commands.
- Designed and executed functional and integration tests across the app, backend services and vehicle connectivity.
- Took part in high-level design and specification reviews, building in testability and traceability early in the SDLC.
- Logged detailed, easy-to-reproduce defects and worked with engineering teams through to resolution.

Software QA Engineer | KodePloy | 01/2016 – 03/2019

Responsive e-commerce web application connecting general contractors, homeowners and real estate agents.

- Tested web and mobile applications across functional, UI/UX, regression, end-to-end, compatibility and backend testing.
- Created and executed automated test scripts with Selenium WebDriver and Cucumber (BDD).
- Wrote test documentation (test plans, test suites and test cases) and ran build acceptance testing for each release.
- Performed bug triage during regression cycles to prioritize the most critical defects before release.
- Ran usability and accessibility testing to catch ergonomic and accessibility issues on web and mobile.
- Logged clear, easy-to-reproduce bug reports in Jira and verified fixes through to resolution.

Project

Rostr QA Portfolio (in progress) | Personal project (live site + GitHub) | Python, Pytest, Playwright, DeepEval, GitHub Actions

- Building a workforce demo app (scheduling, time off, payroll, AI assistant) with a switchable "bug mode" that plants 10 real defects, and a test suite that catches every one of them.
- CI release gate: GitHub Actions runs the suite twice; the clean build must pass and the bugged build must catch every planted bug, or the release is blocked. Results are published to a public dashboard.
- LLM evals for the app's AI assistant with DeepEval: answer correctness against a golden dataset, hallucination checks, prompt-injection resistance and token/cost budgets.

- UI, API, database, unit and accessibility (axe) tests across Chromium, Firefox, WebKit and mobile viewports, built with the Page Object Model and a risk-based test strategy.

Education

Master's and Bachelor's Degrees in Translation of Foreign Languages (English – Spanish), GPA 3.9

Languages

English (fluent), French (B2, TCF certified)
